We all desire abundant health, vitality, focus, energy, proper weight, and youthful-looking skin which are facilitated by a healthy metabolism and an optimally functioning immune system. However, the combination of a poor diet, toxicity, and the stresses of modern life can cause a relentless hyper-active immune response in the body that has recently been identified as the root cause of almost every metabolic dysfunction. Those include excess fat accumulation, the loss of energy, focus and vitality, the premature aging of skin, and ultimately the development of the most life-threatening conditions.[†]
